Introduction

Entertainer Data Analysis is a project about to analyse data of entertainers. Theme can be any of the choice. We have three data table Basic info, Breakthrough info, and Final info. We have to find out some insight from this data table.
We can also add data according to our choice and try to find out some insight information about the whole data and try to find out some meaning full patterns

Scope

User can find out some insight information that we cannot saw in raw data and present them in beautiful and attractive dashboard by showing charts.

➡️ **Architecture**

▶ The Architecture of entire project is shown above

▶ Our entire data source is our excel file. This excel file is connected to the   power BI server. From the server, data can be shown and accessed

▶ Here we use power BI desktop

▶ Client entered the query to show the graph, after selecting the data in form of rows and columns it will go inside the power BI server. In power BI server, it understands the query and generate best recommended chart based on selected data and return it into the power BI desktop screen.

Deployment

There are multiple ways to deploy the dashboard in power BI. The simplest way is to publish it public from power BI service.

This work can see all the viewers around the world. You can share it via a sharable link

Thus, user can deploy a dashboard using power BI services
